演 講

The CSUG: From miniaturised space instrumentation to data exploitation.

Speaker : **Director Dr. Mathieu Barthélémy**

Grenoble University Space Center, Université Grenoble Alpes, France

Time : 107 年 5 月 24 日 星期四 16:00

Place : 健雄館(科四館) S4-917 教室

摘 要 / Abstract :

The CSUG (Grenoble University Space Center) federates laboratories and education departments for fostering newspace activities in Grenoble Area. It aims to develop payloads and instruments especially for cubesats in various domains such as communication, earth observation or space weather, ...and to use these data for applications. A part of the CSUG project are developed with students and researcher in order to let them acquire space skills added to their main competency domain. Other are entirely dedicated to research and industry allowing IOD or IOV of innovative technologies. In 2018, four instruments are developed at CSUG.

This lecture will give an overview of the CSUG methods and science projects, will described technologies uses to achieve the projects and give some perspectives for new developments.
